

Achiote

Achiote is a shrub tree that grows in the tropical region of the Americas. Also called annatto or urucu, achiote provides a natural pigment called bixin derived from its fruit. This natural colorant has been used by native Americans as well as Amazonian communities to make body paint. Currently, it is used as a food colorant (eg. for coloring cheeses, butter, ice cream, etc) and also as a flavoring.

Available in bulk and packaged.
